

INNOVATING TODAY FOR A BETTER TOMORROW

Tata Wiron
presents
Crimped Mesh
for optimal
screening

For crimped mesh screen panels suitable for separating industrial materials and used at construction sites

Optimising tensile strength values over the period for breakage free crimping and maximized performance for:

- Strengthening the wire to achieve desired firmness and durability
- Enhancing ductility for ease of crimping and forming into screens

Crimped meshes made from our wire are uniform and free from distortion and buckle due to:

- Consistent wire cast and superior control over wire helix
- Drawing over bigger capstans helping in achieving bigger wire coil diameters than competition

Uniform residual layer of rust preventive oil, lubricant and phosphate on the wire surface:

- Improve life of crimping tools
- Provide protection against atmospheric corrosion
